

SOLAR LANTERN PASEO

Sizes

Height 12 " | Width 7 " | Depth 7 " | Weight 3.307 lb

Description

Paseo, as its Spanish name suggests, is an invitation to take a stroll. It is a portable solar powered lantern with 2 operating modes: night-light or manual. The height indicated above relates to the handle in a folded position; when raised the height is 41cm. The lantern consists of a teak structure with black epoxy lacquered aluminium grilles on each of the 4 sides. The top of the lantern is equipped with a high-performance solar panel, 2 lithium batteries, and 10 LEDs giving a total power of 3W, or a maximum of 500 Lumens, which is the equivalent of a 50W incandescent bulb. Colour temperature is 3,000 K (warm white). Batteries are interchangeable with a life span of 3-5 years. The lantern is equipped with a micro USB port for recharging batteries. A micro USB cable is supplied with the lantern. To get a full charge, it takes approximately 7 hours via the micro USB port and 8 hours via the solar panel in optimum conditions. The lantern can provide 5-200 hours of continuous operation depending on the chosen light intensity.
